CSV	(to be/manifest) the (reflected) light of (a certain wavelength) that is perceived by an observer as being a particular color	
OBJ	(to be) an entity having a particular color (e.g., "the red one")	

Primary Color Roots/Stems. There are eight roots for basic colors, shown below as A through H. The prototype color is Stem 1 (labeled as a numeral 1 following the letter); Stem 2 is the color one-third of the way to the next basic color to the left (labeled as a numeral 2 following the letter); Stem 3 is the color one-third of the way to the next basic color to the right (labeled as a numeral 3 following the letter). Thus, 24 basic color terms exist in the language.

	-GY- 'RED'	-ŇR- 'ORANGE'	-ML- 'YELLOW'	-ČW- 'GREEN'	-ḌR- 'CYAN'	-LW- 'BLUE'	-ŽL- 'VIOLET'	-VM- 'MAGENTA'

Stem 3	orangy-red	yellowish orange, ochre	greenish-yellow	light-bluish green, teal green	azure blue	violet-blue	magenta-violet, magenta-purple	dark rose, rose-magenta

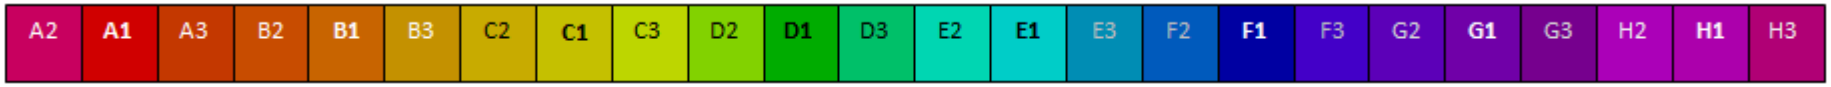

The CLD and COL affixes may be utilized with all color stems (as well as non-color stems where semantically productive). For dichromatic (2-colored) descriptions, concatenate one color stem into another using COMITATIVE format.

As can be seen from the two strips below, the eight basic color roots with their three stems, in conjunction with the CLD affix, are sufficient to provide equivalents to standard Western color terms. Note that the Western basic color terms 'pink' and 'brown' do not have roots. The various shades covered by those two color terms are expressed as derivatives of red or magenta, and orange respectively. Use of the CLD affix also provides terms for more obscure shades such as "peach", "mauve", "turquoise", "indigo", "olive", "rust", "burnt sienna", "cobalt blue", "forest green", "beige", "burgundy", etc.

Light/pale colors: below is the same color strip of the basic color roots/stems plus the CLD/2 affix:

Dark/deep colors: Here is the color strip of the basic color roots/stems plus the CLD/8 affix:

Using the COL affix, in conjunction with Phase and the Modulative affixes, one can add qualities such as "gleaming," "twinkling", "opalescent", "glittering", etc. In addition to the above scheme, the COL/7 affix provides for terms based on the color of a tangible object.

Three Additional Basic Color Roots: The following three roots do not follow the same template as the eight roots above (as they do not have hue variation):

-**BV**- 'WHITE': Stem 1) something white; 2) something light-colored or pale-tinted; 3) something whose color/visibility is washed out by bright light/glare
